

Minerals, Magmas & Megastructures

13 - 15 September 2006

The Fermor Flagship Meeting of the Geological Society
Flett Lecture Theatre of the Natural History Museum

This international meeting will focus on megastructures, their control on magmatic activity at all levels of the Earth, and their control on the formation of mineral deposits globally. This breadth reflects the eclectic philosophy of Sir Lewis Fermor. The meeting will encourage significant cross-fertilization of ideas between the specialist groups.

We are honoured to announce **Professor Bob Bodnar, Virginia Tech** as the Fermor Lecturer.

Keynotes John Thompson Teck Cominco • Steve Cox ANU • Lucilla Benedetti Aix-en-Provence • Valerio Acocella Rome • Basil Tikoff UW Madison • Martin Sharpe Ridge Mining • Brent McInnes CSIRO
