

Geo-what? Challenges in communicating geological risks and concepts

Dr Jen Roberts

+ Prof Zoe Shipton, Dr Emma Comrie (University of Strathclyde)

+ Dr Clare Bond (University of Aberdeen)

+ Dr Linda Stalker (CSIRO)

Scotland's centre of expertise connecting climate change research and policy

Challenges to communication: Geoscience

Public dialogue and public acceptance is particularly challenging for:

a) Remote, uncertain or unfamiliar things

→ geology / the subsurface

- b) Technical, sensitive or emerging, concepts
 - → the energy system (& other things)

Poor Geo-energy!

[e.g. Radwaste disposal, CCS, UG, and energy storage (incl. compressed air / hydrogen storage].

Challenges to communication: Geoscience

Barriers to e.g. the low-carbon transition and the use of georesources are not primarily technical, they are societal.

This talk:

Language-based challenges:

- a) Concepts & Context
- b) Terminology
- c) Uncertainty & Change
- d) Protocols

Other challenges wrapped up in this include:

- e) Trade-offs
- f) The nature of science & expertise
- g) Politics/Political framing
- h) History of change/political past.

"Why is Building Public Interest and Promoting Inclusive Dialogue important?"

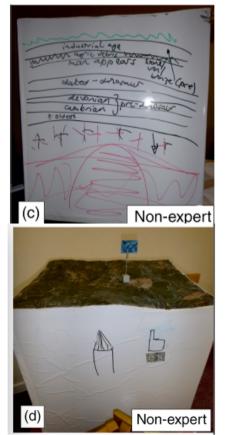

Dr Jen Roberts | jen.roberts@strath.ac.uk | University of Strathclyde | @the_JenRoberts

Platt (1964)

Challenges to communication: (1) Concepts & (a) the subsurface Context

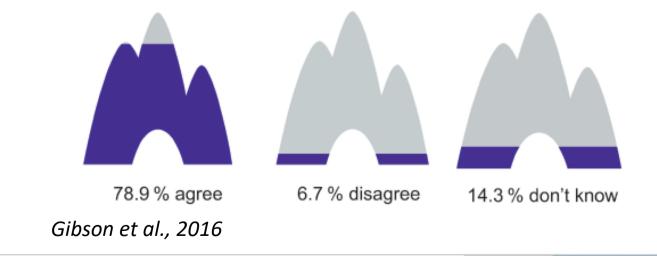

A typical human has a volume of 66.4 L (0.066 m³).

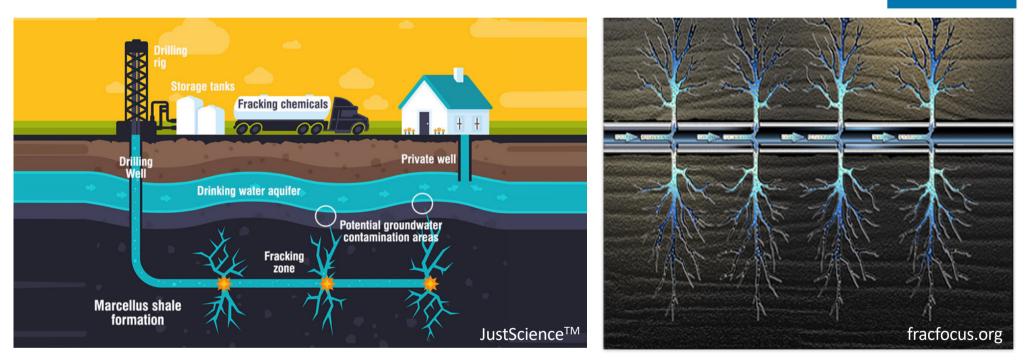

Someone trying to understand the processes that have developed our planet is trying to understand something 10²³ larger in volume than themselves.

Shipton et al. (submitted).

'Water naturally forms channels underground in order to flow through rock'

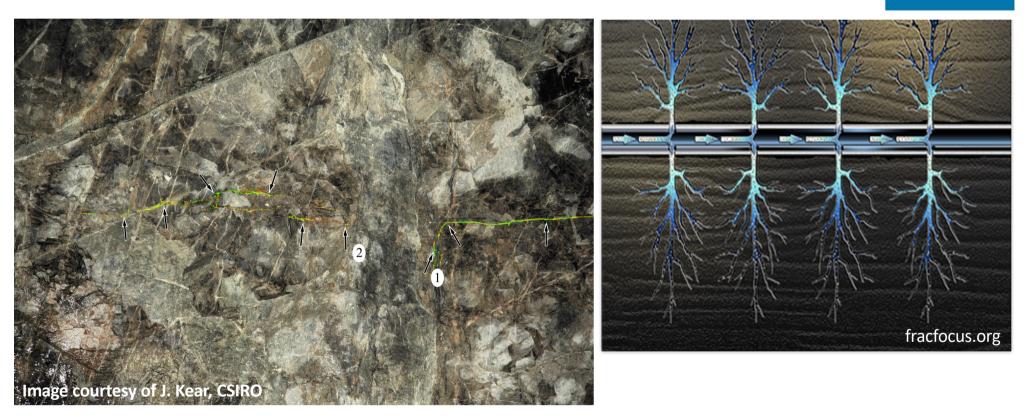

Challenges to communication: (1) Concepts & (a) the subsurface Context

University of

Strathclyde

Challenges to communication: (1) Concepts & (a) the subsurface Context

No scale, sorry...

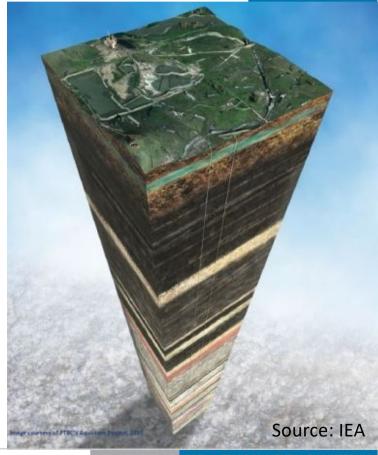

Dr Jen Roberts | <u>ien.roberts@strath.ac.uk</u> | University of Strathclyde | @the_JenRoberts

University of Strathclyde Engineering

Challenges to communication: (1) Concepts & (b) risks Context

CCS: You have been injecting megatonnes of pressurised CO₂ into rock formations deep underground for years. A leak occurs. <u>What does that leak look like?</u>

DEPARTMENT OF CIVIL & ENVIRONMENTAL ENGINEERING

Challenges to communication: (1) Concepts & (b) risks - what does a CO₂ leak look like? Context

Daylesford, Victoria (Australia). March 2017

Crystal Geyser (USA) in 2005

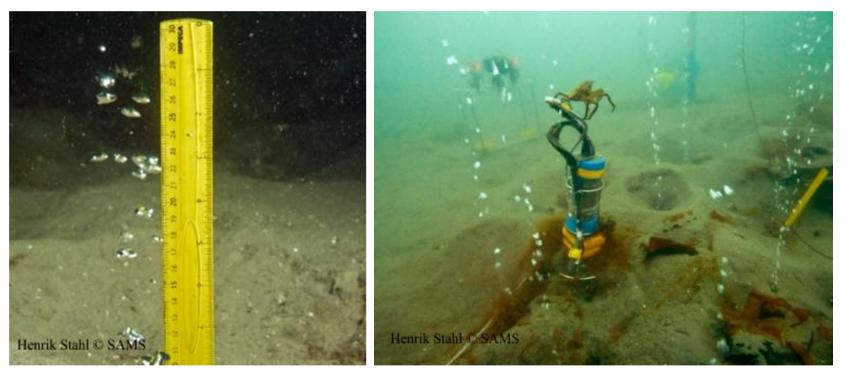

DEPARTMENT OF CIVIL & ENVIRONMENTAL ENGINEERING

Challenges to communication: (1) Concepts & (b) risks - what does a CO₂ leak look like? Context

How much CO_2 is in a bubble?

Dr Jen Roberts | jen.roberts@strath.ac.uk | University of Strathclyde | @the_JenRoberts

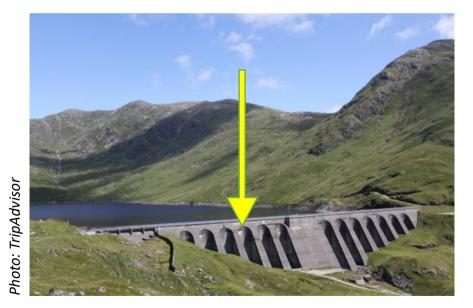

University o

Strathclyde

Challenges to communication: (b) Context of risk

What does a leaking dam look like, and who would notice it?

➔ Normalised risk?

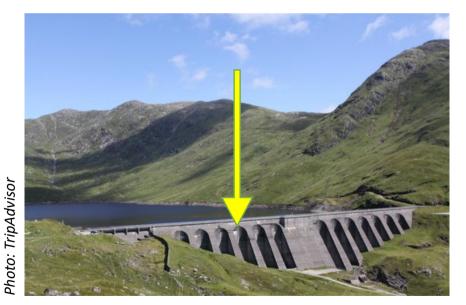

Dr Jen Roberts | jen.roberts@strath.ac.uk | University of Strathclyde | @the_JenRoberts

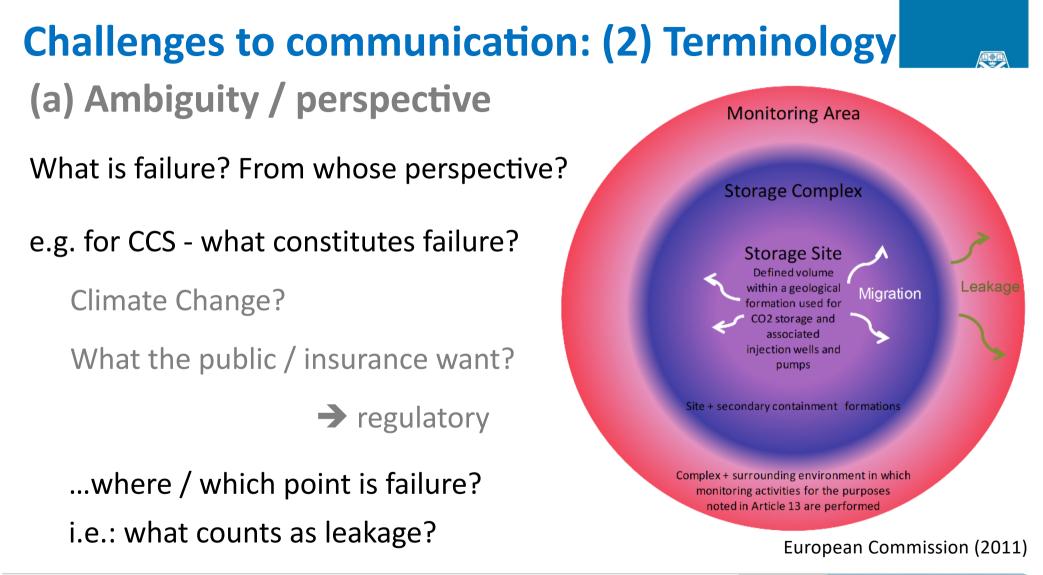

Challenges to communication: (b) Context of risk

What does a leaking dam look like, and who would notice it? → Normalised risk? What is failure?

Dr Jen Roberts | jen.roberts@strath.ac.uk | University of Strathclyde | @the_JenRoberts

Challenges to communication: (2) Terminology (a) Ambiguity / perspective

(terrestial site only) Groundwater aguifer Many hundreds e.g. for CCS - what constitutes failure? to several thousands of metres Impermeable Caprock **Climate Change?** May be hundreds to CO2 storage reservoir thousands of metre What the public / insurance want? → regulatory ...where / which point is failure? Margin of Storage Complex (Definition Site Specific) i.e.: what counts as leakage? **RISCS Final Report (2014)**

Ground surface or seabed

Challenges to communication: (2) Terminology (b) Topic specific – deep jargon

Earth-Science Reviews Volume 166, March 2017, Pages 132-152

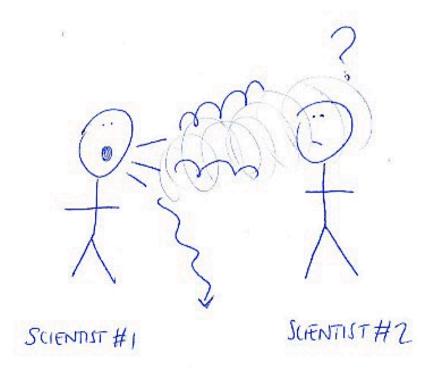

Invited review

Shales at all scales: Exploring coupled processes in mudrocks Anastasia G. Ilgen ^a ^A ^B, Jason E. Heath ^b, I. Yucel Akkutlu ^o, L. Taras Bryndzia ^d, David R. Cole ^e, Yousif K. Kharaka ^f, Timothy J. Kneafsey ^g, Kitty L. Milliken ^h, Laura J. Pyrak-Nolte ⁱ, Roberto Suarez-Rivera ^j

https://doi.org/10.1016/j.earscirev.2016.12.013

Get rights and content

"Barriers of lexicon among geoscientists and engineers impede the development and use of conceptual models for the coupled thermalhydraulic-mechanical-chemical-biological (THMCB) processes in mudrock formations".

Jargon ==> also a problem for scientists.

Iniversity

Challenges to communication: (2) Terminology (b) Topic specific – light jargon

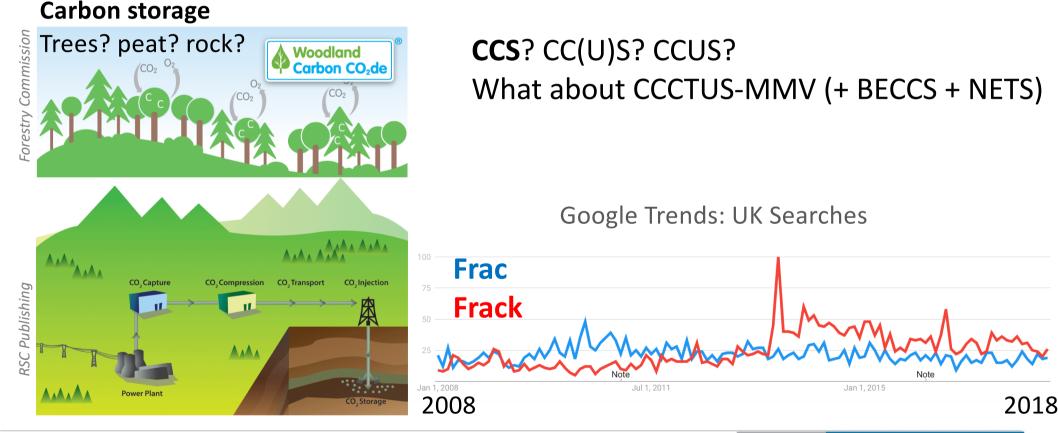

Fracking: You are stimulating a well, ramping up the fluid pressures to crack the rock kilometres deep. It causes an earthquake. <u>What happens?</u> Q: Do you associate earthquakes with shale gas extraction?

Earthquakes? Tremors? Microseismic? Micro-tremors? Felt? Unfelt?

→ the language matters

Challenges to communication: (2) Terminology (c) Synonyms + Homonyms + Change

Dr Jen Roberts | jen.roberts@strath.ac.uk | University of Strathclyde | @the_JenRoberts

University

Strath

Challenges to communication: (3) Uncertainty

Now, what I want is facts.

Thomas Hardy, Hard Times

Source: Priemco

Challenges to communication: (3) Uncertainty

What I do NOT want is conflicting facts.

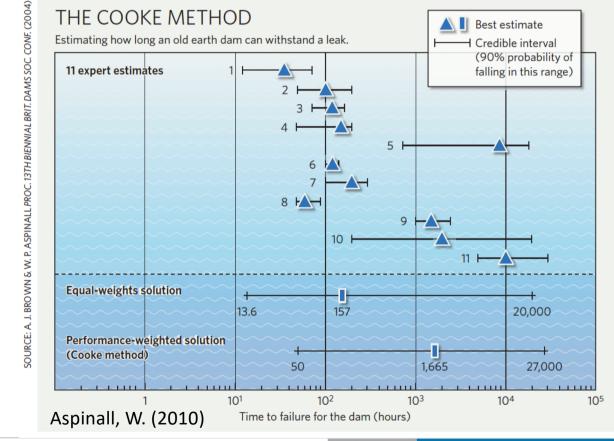

(Not Thomas Hardy)

Source: Priemco

Challenges to communication: (3) Uncertainty (a) conflict

Different experts say different things. Why?

Dr Jen Roberts | jen.roberts@strath.ac.uk | University of Strathclyde | @the_JenRoberts

DEPARTMENT OF CIVIL & ENVIRONMENTAL ENGINEERING

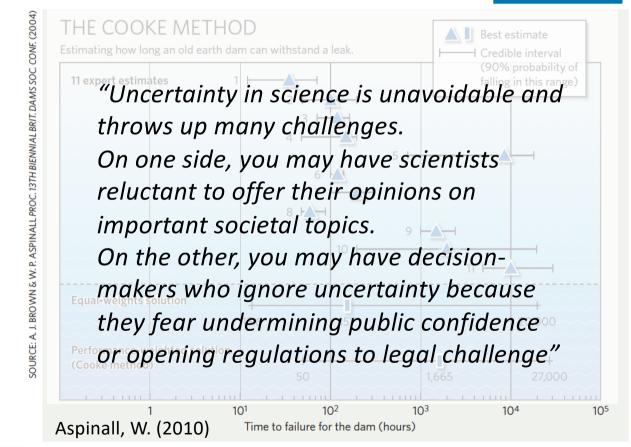

University of

Strathc Engineering

Challenges to communication: (3) Uncertainty (a) conflict

Different experts say different things. Why?

And.... how much <u>do</u> the publics mind?

Dr Jen Roberts | jen.roberts@strath.ac.uk | University of Strathclyde | @the_JenRoberts

Challenges to communication: (3) Uncertainty (a) conflict & change

Different experts say different things. Why?

e.g. Shale Gas Impacts:

Scope? Scale? Who? When? In context with other risks/impacts? Information is evolving

Adapted from Adgate et al. & North et al. (2014)

Challenges to communication: (4) Protocols (a) Risk assessment

Traditional risk assessments often overlook key factors influencing public concerns:

"Focusing on the engineering concepts of risk, such as probabilities & damage estimates, is unlikely to meet people's actual concerns"

Strathc

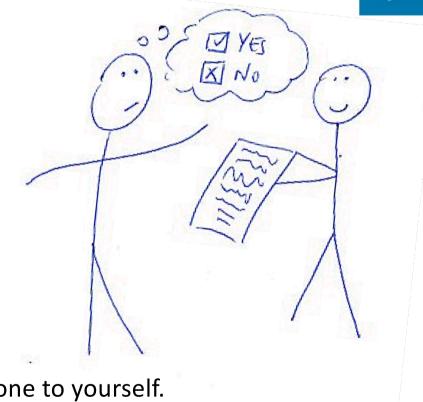

Challenges to communication: (4) Protocols (b) Consultation → One-way?

Emotionally loaded term

Consultation. NIMBY. Social acceptance. Social license.

Scrutiny is a Good Thing.

Do NOT do onto others as **you** would have done to yourself. Do onto others as **they** would have done to themselves.

Challenges to communication: (4) Protocols (b) Consultation

One-way? → *loaded term*

Engage Better!

Engagement = Two way

University of Strathclyde Engineering

A report on findings from public dialogue

Prepared by TNS BMRB

URN: 14D/262

Principals of Engagement

Challenges to communication: (5) The Future

"...it is difficult to engage in a serious public debate over risks or to develop an effective risk communications strategy if there is no actual project on which to present information."

Challenges to communication: (5) The Future

Moving forward together

Getting the Science Right

Getting the Right Science

Getting the Right Participation

Getting the Participation Right

Synthesis Reflexive i.e. listen & respond

North et al. (2014)

Challenges to communication: (5) The Future

Language challenges:

Concepts and context

Terminology

Uncertainty and change

Protocols

Bear these in mind. Be explicit. We can do better.
